Ref: SPAM Compliance Statement

To whom it may concern,

Further to your request for an official statement re compliance of the Inviter Proximity marketing device with SPAM legislation and regulations, we are pleased to be able to advise that the Inviter primary interaction platform with Android Smartphones and Tablets is based on Google's Nearby Platform, which is wholly and entirely compliant with all and any SPAM legislation and regulation in any country in the world.

Google Nearby is a core API inclusion of Google's Android platform so all Android Smartphones and Tablets have Google Nearby installed activated as standard. Android users can, of course, choose to mute or remove Nearby functionality should they wish via their smartphone and/or tablet. In essence, Inviter devices merely provide an information point that interacts with a developed and regulated API developed by Google for Android Smartphones and Tablets.

As one of the world's leading proximity technology developers and integrators, Inviter places a massive degree of importance on ensuring our devices and solutions are developed to work in conjunction with platforms that comply with SPAM legislation and regulations as part of our core focus on end-user safety, participation, and interaction with our proximity devices and solutions. We trust the above provides clarity and reassurance on this issue.

Should you have any further questions or queries re the Inviter, we would be more than happy to provide disclosure.

Your sincerely,
Erez Atia
